Is your home or office making you sick?

According to the EPA and SAB (Scientific Advisory Board): **“Indoor air pollution is one of the top 5 risks to our health. Cancer, heart disease, emphysema, COPD and other respiratory diseases can be caused from prolonged exposure to certain types of indoor air pollution.”**

Dr Bill Laughridge, heart surgeon and author of Every Breath You Take: **“When you understand the factors that cause or exacerbate airborne contaminants, you empower yourself to take steps to change them!”**

According to the EPA: **Mold and Fungus** can cause symptoms like: headaches; difficulty breathing; skin irritation; allergic reactions; and aggravated asthma symptoms. In addition, molds can irritate the eyes, skin, nose, throat, and lungs of individuals whether or not they are allergic to mold.

FYI - WA Dept of Ecology recommends **additional research to determine how much the following symptoms are attributed to mold**: Children's developmental and sensory integration disorders; Dyspnea; Airflow obstruction in healthy persons; Mucous membrane irritation syndrome; COPD; Inhalation fevers; Lung illness in healthy adults; Asthma development; Acute idiopathic pulmonary hemorrhage in infants; Skin symptoms; GI tract problems; Fatigue; Neuropsychiatric symptoms; Cancer; Reproductive effects; Rheumatologic and other immune diseases.

Common sources of indoor pollutants (Information obtained from the EPA)

vacuum cleaners; dust mites; mold; fungus; pesticides; tobacco smoke; pressed wood; carpets; construction materials; dry cleaning; air fresheners; paint supplies; paneling; humidifiers; fireplaces; plywood; attached garage; electronic filtration devices (ozone)

Clean air for better health 😊 **Why wait for additional research and regulations ... when taking proactive action now could help maintain your health - both short term and long term? You probably drink filtered water ... why not filter your air?**

Whether you are looking for superior cleanliness ... or have health challenges and need clean allergen and germ free air, you will appreciate what we have to show you. (Rated as a class II medical device by the FDA)

Call to set an appointment for your no obligation presentation. By calling you will automatically be entered into our monthly \$100 gas or groceries drawing.

Dust Mite Symptoms include:

itchy skin (little bumps and rashes)	Runny nose &/or stuffed sinus	sneezing
puffy, swollen or discolored eyelids	irritated, watery, and reddish eyes	Unexplained aches and pains
"tight" chest and/or wheezing	head or sinus aches	dry, unproductive cough
raspy voice	difficulty concentrating	mental fatigue
depression &/or feelings of lethargy (no "get up and go")	snoring and sleep apnea (both are aggravated by mites)	bad grades or poor performance on the job

Life long, ill-effects include:

asthma	bronchitis	perennial rhinitis
eczema	dermatitis	sinus infections
hearing loss (incl. glue ear)	lessened quality of life	other serious health issues

Children, especially newborns and those up to 5 years of age are extraordinarily susceptible to the health hazards of inhaling the 9 allergens associated with dust mites. Particularly the potent allergen "guanine" found in their fecal matter. Once allergic, there is no known cure, only prevention by controlling their contamination. **Call so we can**

show you how this technology gets results. We don't have all the answers but will gladly share what we know with you. According to the EPA, 1 out of 13 kids have asthma ... help us find them and improve their quality of life. Just for taking the time to evaluate our system, a \$50 credit towards purchase will be set aside for a family with a medical need and who are financially challenged.

Comments from some of our new friends:

"I was not feeling well, 3 weeks into fighting a persistent sinus infection and cough. (during the presentation) ... the air began to almost immediately feel lighter, fresher, cleaner. And, most astonishing of all to me, I started to feel much better; my cough subsided, my sinus stopped hurting, and laryngitis actually began to clear. I would not have believed this if it had not happened to me." Victoria

"A month later, I have noticed a dramatic change in the health of my family." Amy

"My patients and employees all felt the difference and were very happy with the air quality." E. Eskander, MD

"I would highly recommend the Defender for allergy sufferers as well as people with breathing disorders such as asthma and COPD." J. Blake PA C

"We both suffered with allergies and sinusitis. Since we got the new air filtration system, our suffering has virtually been eliminated." Pearl

"I noticed that the longer I used the Defender, the better my son got. ... Why would anyone put a price on their family's health?" Cynthia

"I didn't know HEPA filtration misses over 80% of fine particles so my vacuum cleaner just kept blowing the fine dust back into my home!?" Very educational - thank you." Elleyne
